

Data Quality Filter

VPro has new filter that can limit the data included in your report by the quality of the data. When the data is entered, there is an option to rate the data as Excellent, Good, Fair, Poor or you can leave it empty (Null).

BEC Use	Data Quality	
1	Site	Excellent
	Veg	Excellent
assen	Soil	Excellent

Now, when it comes time to generate a summary report, you have the option of filtering the plots that will be included in your report by specifying the quality of the data.

The screenshot shows a dialog box titled "Data Quality". It contains the following elements:

- A checkbox for "Enforce rules" which is checked.
- A checkbox for "Include Nulls" which is unchecked.
- Three rows of filters, each with a label, a dropdown menu, and a checkbox:
 - "Site >=" with a dropdown set to "Poor" and a checked checkbox.
 - "Veg >=" with a dropdown set to "Poor" and a checked checkbox.
 - "Soil >=" with a dropdown set to "Poor" and a checked checkbox.
- A fourth row with the label "BEC Use =", a dropdown set to "1", and a checked checkbox.
- A "Help" button at the bottom.
